

Ghana's trusted rental platform — verified listings, one Accra neighborhood at a time.

Ghana's rental market runs on WhatsApp groups and word of mouth — scams are common enough that trust, not features, is the real barrier to adoption. Efie by Bisa is the map-first, mobile-first platform built for Ghana's realities: flood risk, water reliability, backup power, and a verification layer no informal agent offers. Unverified listings stay visible so supply never stalls; personally verified ones are ranked and badged. We're proving this block by block in Accra, following advisor Erik Nygard's (Kofa, ex-Limejump/Shell) read that density beats geographic spread this early.

WHERE WE ACTUALLY ARE

Built	Live product at bisaefie.com — map-first search, Ghana-specific listing data (flood risk, water source, backup power), tiered verification badging.
Not yet proven	Real leases closed and commission collected. We haven't run the loop on paying customers yet — that's exactly what this round funds.
What the raise buys	We're closing our first paying leases by hand in one dense Accra neighborhood, personally verifying each property, before we spend a euro on scaling anything.

FOUNDING TEAM

Why this team wins: an engineering leader whose location-tech background maps directly onto Efie's product, paired with a co-founder whose network and language fluency make neighborhood-by-neighborhood verification a real operation, not a slide.

Julia Wallin

FOUNDING ENGINEER

Built and shipped Efie's live product solo, end to end. 12+ years in engineering, including Director of Engineering at Cognite and a patented geospatial AI method for HD maps at TomTom, where she also led and coached engineering teams. A recognized voice on engineering leadership across podcasts and keynotes.

Roland Danso

CO-FOUNDER & CRO

MSc Business Administration, Xi'an Jiaotong University, thesis research on Ghana's water access economics — the data lens behind Efie's flood-risk and water signals. Real estate sales experience in Dubai (~AED 5M closed). Fluent in Twi and Ga, with the on-the-ground Ghanaian network that makes personal verification actually executable.

BUSINESS MODEL

- Free to list, always — individuals and agencies alike.
- 8% commission on the confirmed lease's upfront payment, charged to the landlord only.
- Undercuts the informal norm of agents charging tenants a full month's rent.
- Invisible to the renter — Uber-style, single-sided fee.

COMPETITION

meQasa (agent-focused, pay-to-list) and general classifieds like Tonaton and Jiji dominate today; Ownkey is the closest analog but hasn't cracked landlord volume. The real competition is informal: agents working purely by WhatsApp and word of mouth, with no digital footprint at all.

THE CRUX: TWO QUESTIONS THIS ROUND ANSWERS

Does verification pay for itself? At 8%, a typical lease earns Efie about €133. If verification runs through paid agent-partners at ~25-30% of that commission — the leading model, not yet tested — gross margin lands around €93-100 per lease before infrastructure costs. The real, tested number, and whether partner-based verification can scale past what one person can check by hand, is exactly what this pilot proves.

Do landlords stay on-platform to pay? Payment and ID run through the platform, not around it. That enforces Ghana's legal 6-month cap on upfront rent — a concrete win for renters, who are routinely asked for 1-2 years upfront today — and gives landlords real assurance the tenant will pay. Both sides get a structural reason to stay, not just a lower fee. We haven't stress-tested that at real volume yet — this round does.

THE ASK

€60,000

Funds founder pay, continued platform development past the MVP, and a real operating budget to run and verify the pilot in one Accra neighborhood — including a paid local contact for door-to-door landlord recruiting and periodic travel from Amsterdam. Target: prove the loop — twelve landlords, each with at least one signed lease and payment collected through the platform — within 6 months. That proof, not a growth projection, is what underwrites the next round.
